

Evernote + Slack

Two versatile platforms, working seamlessly together

Today, 75% of employers say that more than **two hours of efficient work are lost every day.** The Evernote and Slack integration lets you take productivity and collaboration to the next level by keeping your ideas all in one place so they're easy to access and share at all times.

Never leave Slack

You can find notes, images, and web clippings in Evernote and put them right into Slack without having to switch between apps.

Cut out copy and paste

Conversations and decisions made in Slack are quickly saved to Evernote for future reference and retrieval.

Make yourself a note

Set a reminder, create a task, or just capture a thought into Evernote while you're chatting in Slack.

Leverage commands and actions

Use Evernote commands and Slack Actions. Actions make it quick and simple to take, find, and share notes while having conversations. This way nothing gets lost.

Take Notes - Did an idea click while in the middle of a Slack conversation? You can jot it down right within Slack and your note will automatically sync in Evernote.

Clip Messages - Turn a Slack channel conversation into meeting notes when you clip all messages, PDFs, and docs to Evernote.

Find and Share Notes - Search Evernote right from Slack and bring your notes straight into your chat.

You work in Evernote. You chat in Slack. Now you can increase productivity and efficiency by combining two main features of team and individual work flows.
